I-way — Business Requirements Document

Business case, scope and requirements

October 10, 2026

Table of Contents

Classification: INTERNAL — CONFIDENTIAL. Not for the public website or any publicly accessible folder.

Document	Business Requirements Document (BRD)
Product	I-way
Version	1.0 — draft for review
Date	October 10, 2026
Companion	PRD (docs/PRD.md)
Basis	Brand Kit, public-experience directive, landing-page prototype, Logistics App Design (Make file) with its embedded proposal, rebuild documentation and style-guide proposal

All figures below are either taken from the source material or marked **[TBC]**. No financial projections, pricing or dates are invented.

1. Executive summary

I-way is a connected logistics platform for trucking operations. It joins four applications — a Driver Mobile App, a Carrier Admin Portal, a Fleet Company Portal and an I-way Platform Admin — around one rule: every business function has a single owner, and every other party can only view, submit, request, approve or monitor it.

It replaces and extends iWay Dispatch v1, a production dispatch and TMS platform whose operation has been hampered by inaccurate settlements, pay-week errors, slow performance and a lack of self-service correction tools, and whose mobile source code no longer exists. A public website under the I-way brand introduces the product and collects early-access interest without disclosing internal strategy or technology.

The business case rests on four outcomes: dependable money handling (settlements and invoices), faster and safer dispatch, lower compliance risk, and an owned, maintainable platform.

2. Business problem and opportunity

Problem (source: v1 known issues and master requirements)	Business impact
Settlement and pay-week calculation errors (deductions counted twice, loads in the wrong week, negative or zero amounts)	Payee disputes, manual corrections, financial risk
No self-service tools to edit, void, move or reassign records	Dependence on a developer for routine fixes

Problem (source: v1 known issues and master requirements)	Business impact
Slow pages and outages on undersized hosting	Lost productivity; failure to void an invoice during an outage
Mobile apps cannot be maintained (no source)	Driver experience frozen; new features impossible
Carrier-owned drivers and fleet-company drivers are not distinguished; fleet-company business model unsupported	Cannot serve managed-fleet carriers
Unclear permissions between parties	Duplication, disputes, data-exposure risk
No brand-consistent public presence	Weak trust and conversion for new prospects

Opportunity. Support two carrier operating models at once — Carrier Fleet and Managed Fleet — on one platform, with auditable money flows and one driver app for every driver.

3. Business objectives

ID	Objective	Measure	Target
BO-1	Accurate settlements	Settlement corrections requiring developer action; disputed settlements per pay week	Baseline from v1 history; target **[TBC]**
BO-2	Faster dispatch	Time from load creation to driver acceptance	Baseline then target **[TBC]**
BO-3	Compliance control	Expired documents on dispatch-eligible drivers and equipment	Zero by rule (BR-020); monitored
BO-4	Faster cash collection	Invoice-to-payment days; invoices without recorded payment status	Baseline from v1 days-to-pay report; target **[TBC]**
BO-5	Self-service operations	Share of routine corrections performed by users with audit	**[TBC]**
BO-6	Early-access demand	Early-access submissions; Get Started click-through	Set after first measurement period **[TBC]**
BO-7	Owned platform	Source, repositories, database, domain, store accounts and design files company-owned	Complete at handover

4. Stakeholders

Stakeholder	Interest
Executive sponsor / product owner	Strategy, scope, release decisions
Carrier management	Operational control, compliance, profitability
Dispatchers	Daily load workflow
Accounting	Invoices, factoring, settlements, escrow
Drivers (carrier, fleet, owner-operator)	Simple execution, accurate pay
Fleet companies	Fleet control, driver pay, fair settlement
I-way platform operations	Onboarding, support, governance

Stakeholder	Interest
Brokers, shippers, receivers	Timely notices, documents, tracking links
Factoring companies	Invoice submission, remittance reconciliation
Design and engineering vendors	Clear scope and handover
Legal and compliance	Privacy, terms, data handling, regulated documents

Named participants in the supplied material include the product-strategy attendees and the documentation author; sign-off names are to be completed in §14.

5. Scope

5.1 In scope

1. Public website with early-access capture and sign-in chooser (R0).
2. Driver Mobile App and Carrier Admin Portal for the driver–dispatcher relationship (R1: onboarding, equipment, customers/brokers, load creation and dispatch, execution, documents, compliance, notifications, audit).
3. Money: invoicing, factoring submission, payment tracking, pay weeks, settlements, escrow, driver earnings, reports (R2).
4. Fleet Company Portal, management agreements, fleet settlements, driver pay and fleet escrow (R3).
5. Full Platform Admin: carrier lifecycle, cases, billing, risk, configuration, payment monitoring (R4).
6. Migration from iWay Dispatch v1 and company ownership of all assets.

5.2 Out of scope (for this BRD)

Broker/shipper self-service portal; committed pricing and dates; tax reporting enhancements and expanded carrier performance dashboards (marked “possibly roadmap” in the proposal); ELD, fuel-card and accounting integrations beyond scoping; any public disclosure of internal strategy or technology.

5.3 Assumptions

- The initial release covers the driver–dispatcher relationship only (October 3, 2026 meeting); the four-app MVP in the master requirements is the longer-term target.
- Brand Kit tokens supersede the earlier style-guide proposal.
- The platform stack is chosen through ADRs; v1 stack (Angular, .NET, SQL Server) is not binding.
- Brokers, shippers, receivers, factoring companies and truck owners are records (and recipients of notices), not logged-in users, until a later release.

5.4 Constraints

- Tenant isolation between carriers and between fleet companies is mandatory (BR-010, BR-011).
- Sensitive data (SSN, ID, bank, tax) requires legal review and strict handling before collection.
- The public site must keep a strict information boundary (directive §1).
- The earlier five-month estimate does not apply to this scope.

6. Business requirements

ID	Business requirement	Priority	Release	Traces to
BRQ-01	The business shall present I-way publicly with a credible, brand-consistent website that converts visitors to early-access leads without revealing proprietary strategy, algorithms or architecture.	Must	R0	PRD §13

ID	Business requirement	Priority	Release	Traces to
BRQ-02	The platform shall let a carrier onboard, approve and manage its own drivers, trucks, owners, brokers, customers and factoring companies.	Must	R1	FR-CAR-009 to 016, 019
BRQ-03	The platform shall let carriers create, assign, dispatch, track, edit, void and complete loads, with multi-stop support.	Must	R1	FR-CAR-002 to 007
BRQ-04	The platform shall give every driver one mobile app to accept loads, confirm stops with location assistance, capture signed BOL/POD, report exceptions and keep documents valid.	Must	R1	FR-DRV
BRQ-05	The carrier shall hold final authority over dispatch eligibility and compliance for everything operating under its authority.	Must	R1	BR-005, BR-020
BRQ-06	Brokers shall be notified by email on pickup and delivery and receive driver-captured documents, and may receive a live tracking link.	Must	R1	FR-CAR-004, 008
BRQ-07	The platform shall produce accurate, auditable driver and owner settlements by pay week, including escrow, with preview, approval, PDF statements and audited un-approval.	Must	R2	FR-CAR-021, 022, §12.4
BRQ-08	The platform shall generate invoices from completed loads, assemble the invoice packet, submit to broker or factoring company, and track payment (manual and integrated).	Must	R2	FR-CAR-023, 024
BRQ-09	Drivers shall see their earnings and settlement history with PDF statements appropriate to their driver type.	Must	R2	FR-DRV-019
BRQ-10	The platform shall support managed fleets: fleet companies, management agreements, carrier-calculated fleet settlements, fleet-controlled driver pay and escrow ledgers.	Must	R3	FR-CAR-026, 027, FR-FLT
BRQ-11	I-way staff shall onboard and support carriers with governed, audited cross-tenant visibility and no carrier dispatch authority.	Must	R1 / R4	FR-ADM
BRQ-12	Every financial, compliance, dispatch, access and status-changing action shall be auditable.	Must	R1	BR-012
BRQ-13	The business shall own the source code, repositories, database, domain, app-store accounts, design files and secrets.	Must	R1	PRD §15, §17
BRQ-14	The platform shall meet agreed performance, availability and backup targets.	Should	R1	PRD §15
BRQ-15	The business shall migrate from v1 with side-by-side settlement runs before cut-over.	Should	R2	PRD §17

7. Business rules

The twenty rules BR-001 to BR-020 in the PRD (§5.5) are binding business rules. In summary: single ownership of each function; carrier authority over loads, dispatch and eligibility; driver execution without commercial control; fleet company control of its own drivers' employment and pay; carrier calculation of fleet settlements; platform governance without dispatch; explicit equipment ownership; strict tenant and fleet isolation; mandatory audit; deactivate-not-delete; UTC storage with carrier-time-zone evaluation; once-per-week deductions; system-calculated escrow; factored invoices payable to the factor.

8. Key business processes

8.1 Load to cash (carrier driver)

Broker rate confirmation received → load created by dispatcher (customer/broker, stops, rate, billing) → driver and truck assigned → driver accepts → pickup (arrival, BOL signed) → transit → delivery (arrival, receiver signs, POD) → broker notified with documents → carrier reviews and completes → invoice generated and packet assembled → sent to broker or factoring company → payment recorded → load included in the pay week by first pickup date → driver and owner settlements previewed, approved, issued as PDF.

8.2 Managed fleet

Carrier invites and approves fleet company → management agreement signed → fleet adds trucks and drivers → carrier approves them for dispatch → loads run on fleet equipment → carrier calculates fleet settlement (gross, management fee, insurance, fuel advance, escrow, maintenance and other deductions, adjustments) → fleet reviews, acknowledges or disputes → carrier resolves, approves and pays → fleet pays its drivers per its own pay model.

8.3 Onboarding

Started by manager, dispatcher, fleet company or invitation → details and documents → verification → approval by the responsible owner → active only when all blocking items are valid. Records in Draft or Needs Changes stay invisible to dispatch and accounting.

8.4 Compliance

Documents carry expiry dates; reminders at configurable intervals; expiry or rejection of a critical document sets Dispatch Eligible = No until the carrier clears it.

9. Commercial model (business level)

The material identifies the following commercial elements without values; values are **[TBC]** and must not appear publicly until approved:

- Platform subscription and platform fees (iWay Admin configuration).
- Carrier-to-fleet management fee, fee calculation method, settlement frequency, escrow requirement and deduction rules (set per Fleet Management Agreement).
- Dispatcher compensation as a percentage of gross load dispatched.
- Factoring advance and fee percentages and recourse terms (per factoring company).
- Driver and owner revenue shares, admin fee and fixed deductions (per vehicle financial settings).

10. Compliance and risk considerations

The material references CDL, DOT medical certificate, MVR, FMCSA authority checks, annual DOT inspection, Form 2290, W-4/W-9, direct-deposit forms, pre-employment drug screening and Clearinghouse queries. Applicability, retention periods and legal basis for each must be confirmed by counsel before collection. **[TBC OQ-08]**

Business risk	Likelihood / impact	Response
Scope outgrows capacity	High / High	Phased releases, re-estimation
Financial calculation defects	Medium / High	Fixtures, preview, audited un-approve
Data exposure across tenants	Low / Very high	Layered authorization and isolation tests

Business risk	Likelihood / impact	Response
Loss of control of assets again (as with v1 mobile source)	Medium / High	Company-owned repos and accounts from day one
Public claims exceed capabilities	Medium / High	Verified-capability copy rule; review gate
Vendor or handover delays	Medium / Medium	Handover checklist tracked to completion

11. Success criteria and acceptance

- Public website passes the directive's acceptance criteria and IP-disclosure review.
- A carrier completes onboarding, dispatch and delivery of a load end to end (R1 exit).
- Settlement fixtures pass and two parallel pay weeks reconcile with v1 (R2 exit).
- A fleet company's driver completes a load and both settlement layers reconcile (R3 exit).
- Operators resolve a case without developer help (R4 exit).

12. Dependencies

Counsel-approved privacy policy and terms; approved contact details and commercial copy; a sign-up service for early access; selection of maps, messaging, payments and factoring integrations; completion of the v1 handover; engineering ADRs; legal guidance on regulated and sensitive data.

13. Open decisions

See PRD §20 (OQ-01 to OQ-12). The three that most affect business commitments are release boundaries (OQ-01), sensitive-data handling (OQ-08) and approved commercial copy (OQ-07).

14. Approvals

Role	Name	Decision	Date
Executive sponsor			
Product owner			
Finance / accounting lead			
Legal / compliance			
Engineering lead			
Marketing / brand
